To: Data Science & AI Hiring Team, John F. Welch Technology Center (JFWTC)

Company: GE Aerospace

Location: Bengaluru, Karnataka, India

Position: Data Science Intern (Requisition: R5040035)

Dear GE Aerospace Data Science & AI Hiring Team,

I am writing to express my strong enthusiasm for the **Data Science Intern** position within the Data Science & AI team at GE Aerospace's John F. Welch Technology Center (JFWTC) in Bengaluru. As a student pursuing my Bachelor of Engineering in Computer Science and Business Systems (CSBS), I have dedicated my academic and practical journey to applying statistical modeling, machine learning, and Generative AI to solve complex, high-stakes operational problems. GE Aerospace's commitment to inventing the future of flight, operational excellence through FLIGHT DECK, and safe, sustainable aviation represents the pinnacle of engineering impact where I aspire to contribute.

The opportunity to develop and deploy modern machine learning, Large Language Model (LLM) applications, semantic analysis, and operations research for Customer Experience and Commercial Sales aligns closely with my background and hands-on projects:

- **Machine Learning & Statistical Modeling (Python, Scikit-Learn, Deep Learning):** During my AI Product Engineering Internship with TechSaksham (a Microsoft & SAP initiative), I developed deep learning classification pipelines in Python, achieving 94% prediction accuracy across 10,000+ data samples while rigorously optimizing inference latency and documenting technical validation data.
- **Generative AI, Semantic Analysis & Operations Research:** In *RazorOps AI* (developed for the Razorpay AI Buildathon), I engineered an autonomous financial reconciliation engine that decoupled non-deterministic LLM reasoning from deterministic business math, enabling semantic analysis of transaction patterns and reducing manual audit overhead by 40%. In *Eco-Track Logistics* (Google Solution Challenge), I interfaced LLM reasoning with real-time IoT telemetry for dynamic, probabilistic supply chain rerouting.
- **Cloud Platforms & Enterprise Data Standards:** I hold certifications as a Google Cloud Associate Cloud Engineer (ACE) and AWS Academy Cloud Architecting Graduate (Grade A), complemented by Fortinet Certified Associate in Cybersecurity (Grade O) and Postman API Student Expert certification (validating 19/19 test assertions). This ensures that every model and analytical pipeline I design adheres to strict data integrity, zero-trust security, and operational reliability.

I am deeply drawn to the pioneering culture of JFWTC Bengaluru, where multidisciplinary teams transform raw data into actionable insights for global aerospace operations. I am humble, agile, eager to learn under senior mentorship, and passionate about communicating complex data findings clearly to stakeholders. I meet all eligibility criteria (B.E. 2027 batch with clean academic record and full college NOC eligibility) and am available to join your Bengaluru center for a full-time internship.

Thank you for your time, consideration, and leadership in advancing the future of flight. I welcome the opportunity to discuss how my analytical skills and dedication can support GE Aerospace's Data Science and AI initiatives.

Sincerely,

Deeksha G

Software Engineer • Applied AI & Cloud Architect

Mangaluru, Karnataka, India (Available for on-site internship in Bengaluru)
